Kshira ERP

Dairy plant operating system

A complete guide to every tab: what it is for, who uses it, and the exact steps to follow. Kshira ERP follows the journey of milk from the farmer, through the plant gate, lab and silo, to dispatch, sales and accounts.

1. Getting started

New users open Create account, fill name, email, plant name, role and a strong password. Existing users sign in with email and password (tick Keep me signed in to stay logged in; use Forgot password for a reset link). The demo login is admin@kshira.in / kshira123 and can be filled with one tap. To sign out, press the red button at the bottom of the sidebar. On a phone or tablet, tap the menu (hamburger) button at the top left to open the sidebar drawer; on a computer the sidebar is always visible. Use the moon/sun button to switch between light and dark theme. The Contact page is open to everyone from the login screen, and Help and contact inside the app raises a support ticket.

Every table has search, a filter, sortable columns, page controls and an Export CSV button. Every Add button opens a short form; saved entries appear at the top and update dashboard numbers immediately.

2. The milk journey

1. **Farmer** - Milk is poured at the village centre. The machine records quantity, fat and SNF.
2. **Centre** - Society or chilling centre keeps the farmer-wise record.
3. **Gate** - Tanker arrives at the plant gate and is entered in the gate register.
4. **Reception** - Weighbridge and lab test the milk. Good milk is accepted, bad milk is rejected.
5. **Silo** - Accepted milk is unloaded into a silo and stock increases.
6. **Production** - Milk becomes curd, paneer, ghee and butter in batches.
7. **Dispatch** - Milk is loaded into a tanker and sent to a plant, booth or customer.
8. **Money** - Farmer payments, sales and accounting vouchers close the loop.

3. Module by module

Dashboard **(Overview, /)**

One screen that shows how the plant is doing right now.

STEPS

1. Open the app after login. You land here.
2. Read the six number cards: collected today, received at plant, silo stock, vehicles inside, farmer dues, sales today.
3. Check the 14 day chart to see if milk is rising or falling.
4. Check silo levels, collection by centre and gate activity to spot anything unusual.
5. Tap any quick link to jump straight to a module.

Tip: Start every shift here.

Account: sign in, sign up, sign out (Overview, /login)

Create a plant account, sign in and sign out.

STEPS

1. Open Create account, fill name, email, plant name, role and a strong password.
2. Sign in with your email and password; tick Keep me signed in to stay logged in.
3. Use Forgot password on the login page to request a reset link.
4. Press the red sign-out button at the bottom of the sidebar to log out.

Tip: Demo login: admin@kshira.in / kshira123.

Gate entry (Gate and receiving, /gate)

Digital register of every vehicle and visitor that enters or leaves the plant.

STEPS

1. Press New gate entry when a vehicle arrives.
2. Fill vehicle number, driver, type (milk tanker, feed, staff, visitor), party and purpose.
3. The entry shows as Inside with the entry time.
4. When the vehicle leaves, press Mark exit on that row.
5. Use the filter to see only vehicles still inside.

Tip: A milk tanker entered here is what the Reception team picks up next.

Milk reception (Gate and receiving, /reception)

Weigh and test every incoming tanker, then accept or reject it and send it to a silo.

STEPS

1. Press Receive tanker.
2. Enter tanker number, route, quantity in litres, fat, SNF, temperature and acidity.
3. Choose the silo to unload into.
4. Pick Accepted, Rejected or Pending.
5. Accepted litres are added to that silo stock automatically.

Tip: Temperature above 8 C or acidity above 0.16 should normally be rejected.

Silos and stock (Gate and receiving, /silos)

Live view of every milk tank with fill level and temperature.

STEPS

1. Each tank shows how full it is and its temperature.
2. Red or amber tanks need attention (almost full or too warm).
3. Use the numbers to decide which silo receives the next tanker.

Tip: Keep raw milk below 5 C.

Dispatch (Gate and receiving, /dispatch)

Milk going out of the plant in tankers.

STEPS

1. Press New dispatch.
2. Enter tanker, destination, quantity, fat and SNF.
3. Status starts as Loading, then On route, then Delivered.
4. Update the status from the table as the trip progresses.

Tip: Pair this with a Milk tanker out entry in Gate entry.

Machine collection (Procurement, /collection)

Farmer-wise records coming from the milk analyser and weighing machine at the village centre.

STEPS

1. Every row is one farmer, one shift: litres, fat, SNF, rate and amount.
2. Filter by shift or search by farmer name or code.
3. Press Simulate machine entry to see how a new reading appears live.
4. Export the table to CSV for the centre.

Tip: Rate is calculated from fat and SNF, so the farmer sees exactly why the amount changed.

Farmers (Procurement, /farmers)

Master list of milk suppliers.

STEPS

1. Press Add farmer to register a new supplier.
2. Enter name, village, centre, milk type and phone.
3. Advance given to the farmer is shown here and is deducted at payment time.

Tip: Keep phone numbers right so bills can be sent by SMS later.

Quality lab (Procurement, /quality)

Spot low fat, low SNF and rejected tankers before they become a loss.

STEPS

1. Cards show average fat, SNF and rejection rate.
2. The chart shows daily average fat and SNF.
3. The alert list shows farmer readings below the limit and rejected tankers.

Tip: Repeated low SNF from one farmer often means water mixing.

Rate chart (Procurement, /rates)

Price per litre for every fat and SNF combination.

STEPS

1. Read the colour grid: darker cells pay more.
2. Use the calculator: type fat, SNF and litres to see the rate and amount.
3. Show the grid to farmers so they understand their payment.

Tip: Rate = fat x 6.20 + SNF x 3.10 in this demo. Change the formula in lib/data.ts.

Farmer services (Procurement, /services)

Vet visits, vaccination, artificial insemination and health checks.

STEPS

1. Press Book a visit and pick farmer, service, animal tag and vet.
2. Visits start as Scheduled.
3. Press Mark done after the vet visit.
4. Charges add up in the top cards.

Tip: Healthy animals mean steady milk and better fat.

Inventory (Production and stores, /inventory)

Stock of cattle feed, products, packing, chemicals and fuel.

STEPS

1. Items below their reorder level show a red Low badge.
2. Press Add item to create a new stock item.
3. Search or filter by category.

Tip: Cleaning chemicals running out can stop the whole plant.

Production (Production and stores, /production)

Batches of milk, curd, paneer, ghee and butter.

STEPS

1. Press New batch, choose the product and litres of milk to use.
2. Press Start when work begins.
3. Press Complete when the batch is done; output and yield % are filled in.
4. Filter by product to compare yield.

Tip: Low yield for the same product is an early sign of a process problem.

Purchases (Production and stores, /purchases)

Purchase orders to vendors for feed, packing, chemicals and fuel.

STEPS

1. Press New purchase order and choose vendor, item, quantity and rate.
2. Order starts as Ordered.
3. Mark received when goods arrive, then mark paid after payment.

Tip: Order before an item hits its reorder level in Inventory.

Sales (Sales, /sales)

Product and milk sales to shops, hotels and booths.

STEPS

1. Press New sale.
2. Enter customer, product, quantity and rate. Amount is calculated.
3. Mark paid or unpaid.
4. Outstanding amount is shown at the top.

Tip: Chase unpaid sales every Monday.

Customers (Sales, /customers)

Customer master with credit limit and outstanding.

STEPS

1. Press Add customer and enter type, city, phone and credit limit.
2. Customers over their credit limit show a red badge.
3. Check this list before accepting a new credit order.

Tip: Stop supply to customers who are over limit and unpaid.

Accounting (Finance, /accounting)

Vouchers for money received, money paid and adjustments.

STEPS

1. Press New voucher.
2. Choose Receipt, Payment or Journal, the account and the amount.
3. Totals of debit, credit and the balance update immediately.
4. Filter by voucher type or search by account.

Tip: Use the same account names every time so reports stay clean.

Farmer payments (Finance, /payments)

10-day payment cycle for farmers, calculated from the machine collection.

STEPS

1. Each farmer row shows litres, gross amount, advance deduction and net payable.
2. Press Pay on a row after the bank transfer or cash payment.
3. Paid rows turn green and the pending total drops.

Tip: Advance is deducted in parts so the farmer never gets zero.

Expenses (Finance, /expenses)

Daily plant expenses with manager approval.

STEPS

1. Press New expense and fill head, description, amount and payment mode.
2. The entry waits as Pending.
3. The manager presses Approve.

Tip: Keep bills for every cash expense.

Fleet (Operations, /fleet)

Tankers, vans, drivers and routes.

STEPS

1. See each vehicle with its driver and route.
2. Status shows Running, Idle or Maintenance.
3. Press Add vehicle to register a new one.

Tip: Keep one spare tanker idle for emergencies.

HR and payroll (Operations, /hr)

Employees, attendance and monthly salary total.

STEPS

1. Tap Present or Absent on a row to mark today attendance.
2. Top cards show headcount, present today and monthly payroll.
3. Press Add employee to register staff.

Tip: Mark attendance before 10 am.

Assets and service (Operations, /assets)

Plant machines with next service date and condition.

STEPS

1. See every machine with its location and next service date.
2. Overdue dates turn red.
3. After repair, press Mark fixed.

Tip: Service the chiller and boiler before the summer peak.

Reports (Insight and admin, /reports)

Ten ready reports, each with live numbers, a chart, a full table, CSV download and print.

STEPS

1. Choose a report tab: daily collection, farmer-wise, reception, gate, dispatch, production, accounts, sales, stock or payroll.
2. Read the four number cards and the chart.
3. Scroll to the data table; sort, page through and check rows.
4. Press Download CSV for Excel or Print for paper.

Tip: Download month-end reports on the last day.

Settings (Insight and admin, /settings)

Theme, plant name and alert limits.

STEPS

1. Switch between light and dark theme.
2. Change the plant name shown in the sidebar.
3. Set minimum fat and SNF limits for alerts.

Tip: Change limits only with the plant manager approval.

Users and roles (Insight and admin, /users)

Who can sign in and what role they have.

STEPS

1. Press Invite user and enter name, email and role.
2. Press Disable to block a user who left the company.
3. Filter by role.

Tip: Give each person only the access they need.

Help and contact (Insight and admin, /support)

Raise a support request and read quick answers.

STEPS

1. Choose a topic, write the subject and message.
2. You get a ticket number like KS-1234.
3. Your recent requests are listed on the page.

Tip: Mention the machine model for analyser or weighbridge help.

4. A day in the plant

- Morning: open Dashboard, check silo levels and what is still inside the gate.
- Tanker arrives: Gate entry, then Milk reception (weigh, test, accept, choose silo).
- Machine collection fills up through the shift; Quality lab shows low fat or SNF alerts.
- Midday: Dispatch loads tankers; mark each trip as it moves.
- Afternoon: Production for batches, Sales and Customers for invoices and credit, Inventory and Purchases for stock, Expenses for approvals, HR for attendance.
- Every 10 days: Farmer payments, press Pay on each row; a payment voucher is created in Accounting.
- Month end: Reports, pick a report, check the chart and table, then download CSV or print it for the auditor.
